The following is an examiner's statement of reasons for indicating allowance of claim 1: The prior art discloses a method for controlling ramp-up of a superconducting magnet, comprising connecting a power supply to the superconducting magnet, determining constraining parameters of the ramp-up, but does not disclose that the constraining parameters comprise magnet current during a first phase of the ramp-up and comprise magnet frequency of field strength during a second phase of the ramp-up; automatically controlling the ramp-up based on the constraining parameters, wherein a switching point specifies when constraining parameters change between the first phase and second phase. This feature in combination with the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.

The following is an examiner's statement of reasons for indicating allowance of claims 13 and 46: The prior art does not disclose applying power to the magnet constrained by a target magnetic field strength or frequency and by magnet temperature during a second phase of ramp-up, wherein transition from the first phase to the second phase occurs automatically without operation intervention. This feature in combination with the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.

The following is an examiner's statement of reasons for indicating allowance of claims 23 and 28: The prior art does not disclose one or more magnet temperature sensors coupled via an analog-to-digital converter to the auto-ramp controller for measuring magnet temperature; and a magnet field strength or frequency sensor coupled via a meter to the auto-ramp controller for measuring magnet field strength or

frequency. This feature in combination with the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.

The following is an examiner's statement of reasons for indicating allowance of claim 34: The prior art does not disclose means for determining constraining parameters of the ramp-up, wherein constraining parameters comprise magnet current and temperature during a first phase of the ramp-up and comprise magnet frequency or field strength and temperature during a second phase of the ramp up; means for automatically controlling the ramp-up based on the constraining parameters, wherein a switching point specifies when constraining parameters change between the first phase and second phase. This feature in combination with the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Fletcher on 07/05/2007.

Please amend the following:

Claims 10-11 depend on a cancelled claim 9. Claims 10-11 should depend on claim 1.

Appropriate correction is required.
